

## One Step Beyond: DN 1000 flanges

Information about **1.4404** | **316L** | **X2 CrNiMo 17-12-2** | **S 31603**

Some people would call it madness, but we at STAPPERT Noxon have chosen to extend our stock range of 1.4404 EN 1092-1 flanges with DN1000 welding neck flanges (type 11B PN10) and DN1000 slip on flanges (type 01A PN10).

After introduction of DN700 and DN800 flanges (in both 1.4307 and 1.4404) to our stock range several years ago, we managed to get known for our ability to deliver flanges, tubes and elbows in these large dimensions directly from our stock in Helmond, the Netherlands.

With the addition of the DN1000 flanges we hope to be able to service our customers even better, especially when there's an urgent need for one of these big boys.

Besides the XXL material, we would like to remind you that we stock a full range of 304L and 316L pipes/tubes plus fittings and flanges, both welded and seamless, in our house.
